

RadPix

Radiological Teaching File System

RadPix is a radiological teaching file system which can be integrated into any PACS environment. It allows users to send selected images directly from the PACS to a stand-alone teaching file server.

- Images are anonymized by the system.
- Radiological teaching files can be created by adding text, annotations and images.
- Annotations are added using built-in drawing software, designed for radiologists.
- Export images as JPGs, PowerPoint files, Image Stacks in PowerPoint files and videos.
- Create publication quality TIFF images with annotations.
- Scroll through stacks of images, change window and level, and toggle annotations on images.
- Make quizzes and interactive presentations.

RadPix extends your PACS functionality to a teaching file platform.
